EDUCATION

Ozyegin University
B.S. Computer Science | Faculty of Engineering

July 2026

PROFESSIONAL EXPERIENCE

Daam Al-Arabia | Data Analytics Intern

July 2024 - August 2024

- Improved server-side data collection by developing custom Google Tag Manager code for the Meta Conversions API (CAPI), enabling more reliable event tracking.
- Enhanced analytics accuracy by implementing data layer structures for event tracking across web interactions using Google Tag Manager.
- Contributed to measurement strategy planning by collaborating on tracking requirements and defining event measurement for digital analytics implementations.

Abdul Latif Jameel Motors - Toyota | Customer Relations Intern

January 2020 - March 2020

- Coordinated inventory tracking and distribution for a high-volume auto parts department, ensuring accurate stock levels and timely order fulfillment
- Served as a front-line point of contact for customer inquiries, resolving part requests efficiently and maintaining high customer satisfaction
- Collaborated with warehouse and sales staff to streamline parts retrieval, reducing customer wait times

PROJECTS

B-HUNT — Decentralized IoT Trust Management Framework | *Senior Project*

- Built **B-HUNT**, a decentralized IoT trust management framework in C++ / OMNeT++ featuring blockchain-anchored evidence, smart contract flagging, and a novel bounty-hunting investigation layer with credibility-weighted validator consensus
- Achieved 93% attack detection and 0% false positives across 450 simulation runs spanning packet-drop, on-off, ballot-stuffing, and corrupt-validator scenarios; introduced service-specific trust vectors that detect targeted attacks missed by scalar models
- Targeting IEEE publication; work evaluated before a panel of four CS professors at Özyeğin University

Car Rental System | Backend

- Built a full-stack car rental management system using Spring Boot and JPA, exposing a RESTful API for car search, reservations, and equipment/service add-ons
- Designed a layered architecture backed by MySQL to manage car inventory, reservations, and rental status.
- Implemented key REST endpoints for car and reservation operations, including search by car type/transmission, reservation creation, and reservation lifecycle management (add services, return car, cancel)
- Wrote unit tests with JUnit and Mockito for all service-layer logic, and integration tests for API endpoints using Spring Boot's MockMvc

TECHNICAL SKILLS

Programming Languages: Python, Java, C++, SQL

Frameworks and Development Tools: Git, GitHub, Linux, Docker
